

NURSE PRACTITIONER - KERRY BYRNE

With the growing complexity of health care and diminishing availability of GP's we are constantly implementing new ways of working and looking at different skill mix to ensure we continue to deliver high quality services to patients.

Patients may not always need to see a doctor and your appointment may be more appropriate with another member of our fully trained practice team. We have recently appointed a Nurse Practitioner KERRY BYRNE to work alongside our existing team of doctors and nurses.

Nurse practitioners are registered nurses who have undertaken advanced training, they are skilled and experienced in assessing, diagnosing and treating both children (over the age of 1) and adults. They conduct physical examinations and perform diagnostic tests.

CONDITION	ADDITIONAL INFORMATION
